

Dunamu Environmental Policy

Preface

Dunamu intends to minimize the environmental effects in due process of its business activities, and continuously contribute to creating a sustainable society by fulfilling all the social responsibilities as a corporation. This policy obeys the domestic environmental regulations, and also respects and supports the internationally recommended standards and disciplines such as the UN Framework Convention on Climate Change, and Global Reporting Initiative(GRI) Standards 2021.

Fields of Application

This environmental policy is applied to Dunamu headquarters and all places of its business. Furthermore, this environmental policy is recommended to be obeyed by all subsidiaries.

Basic Principles

Dunamu will endeavor to strictly obey the below 5 basic principles in order for the current generation to enjoy prosperous lives within the boundaries of not wasting the resources and not declining the environmental conditions for the future generations.

1. Establishing an environmental management process

A systematic environmental management process will be established to continuously endeavor to achieve environmental management results.

2. Establishment of strategy to reduce carbon emission

We will establish long to mid term goals and strategy to actively attempt to deal with the climate change risk.

3. Environmental education and enhancing awareness

In resolute efforts to enhance the awareness among all staff members and encourage active participation in related policies, environmental education and training will be conducted.

4. Monitoring and enhancement

We will cyclically monitor the status of the environmental policy fulfillment through the environmental management system to persevere for enhanced environmental management results.

5. Environmental management results announcements and communications

To exert transparent environmental management, we will announce the environmental management results and actively communicate with the concerned parties.
